

NETCETERA 3DS ACQUIRING PRODUCTS

Process transactions with 3-D Secure protocols and PSD2 SCA exemptions

Reduce risk for non-authenticated transactions, associated refunds and lost revenue, and improve cardholders' experience during online shopping.

Merchants, payment service providers, and acquirers benefit from Netcetera's longstanding experience and expertise in the payment industry and in processing online payments with 3-D Secure. The Netcetera Acquiring products are built on the latest technologies and flexible for further development and continuous enhancement. Technical support, webinars, comprehensive technical documentation and team commitment to new trends in the payment industry facilitate integration and operation.

Our product portfolio complies with all major schemes' programs:

Netcetera 3DS Acquiring products certified with the latest EMV® 3DS protocol version enable smooth transactions

Netcetera 3DS Server to process EMV® 3DS 2.2 and 3DS 1.0 online transactions

Netcetera 3DS SDK for in-app payments based on EMV® 3DS 2.2 standard

Host the 3DS Server on premise in your own environment or integrate with our payment platform – 3DS Server software as a service.

3DS Server SaaS is PCI DSS, PCI 3DS and EMV® scheme-certified solution and does not require efforts on your side for certification.

3DS Server on premise enables full control over the software and system architecture. Developed in compliance with PCI and schemes simplifies your certification efforts.

3DS Server supports configuration of multiple acquirers, merchants, and PSPs

Admin UI for data configuration, transaction search, and user access management.

Netcetera Demo Merchant (NDM) simulator – test application with simulated merchant shop directory server and ACS for integration testing.

Free demo license for 30 days 3DS Server trial.

For Android and iOS platforms

Collects device information (configurable) and performs device security checks.

Full support of EMV® 3DS frictionless and challenge flow.

Handles challenge flows, properly populating the challenge screens coming from the ACS.

Supports HTML and native UI for challenge screens:

Native UI for consistent look and feel as the merchant app with the authentication content provided by the issuer (ACS).

HTML UI for issuer (ACS) consistent experience across consumer devices with issuer-specific design elements.

Netcetera Demo Merchant (NDM) app for demonstration of SDK integration in merchant's native shopping app

Free demo license for 30 days 3DS SDK trial.

Balance transaction security and economic interest based on risk assessment data and SCA exemptions processing logic

Enable the most secure online payments with Netcetera 3DS Acquiring products
Take advantage of the SCA available exemptions with the eCom Exemption Advisor

Netcetera eCom Exemption Advisor for processing transactions with risk based exemptions:
-PSD2 exemptions (TRA, LVP, recurring exemption)
-one leg exemption
-risk score for delegated authentication
Flexible and scalable solution designed to support various exemptions

- 1 Carry out risk scoring on every transaction and check for exemptions.
- 2 Either directly go to authorization or trigger a 3DS call via 3DS server.
- 3 Feed the authorization results back to the exemption tool to let it learn for the future.
